Spectral Panel Cleaning and Calibration

APPN Aerial SOP — Locked revision 1.03

Spectral Panel Cleaning and Calibration

Coming soon — a formal protocol for cleaning, handling, and radiometric calibration of reference spectral panels (e.g. Spectralon and equivalent reflectance targets) is still in development.

The protocol will cover:

- Safe handling and storage of reference panels
- Routine cleaning procedures and approved consumables
- Pre- and post-flight panel capture workflows
- Recalibration intervals and traceability records
- Field QA checks and rejection criteria

In the meantime, follow manufacturer guidance and the calibration steps referenced in the individual sensor fieldbooks.
